

Data scientist with subsequent ML engineering experience, focused on forecasting, experiment analysis, and model evaluation. Connects analytical work at Meridian with reproducible evaluation in Northstar’s applied systems.

Professional Experience

Northstar Transit Labs (fictional) <i>ML Engineer</i>	2022–present
○ Built a monitored document-classification service with human review and reproducible evaluation datasets. ○ Reduced manual triage time by 35% in a fictional internal pilot while preserving reviewer approval. ○ Built an internal retrieval assistant with source citations and an evaluation set. ○ Reproducible evaluation Human-reviewed results	
Meridian Analytics (fictional) <i>Data Scientist</i>	2018–2022
○ Used Python and SQL for forecasting, experiment analysis, and dashboards. ○ Coordinated a small cross-functional working group and mentored junior analysts.	
Example University (fictional) <i>Independent research project</i>	2017–2018
Evaluated uncertainty in image classification on a synthetic dataset and shared reproducible notebooks internally. This was not a peer-reviewed publication.	

Core Expertise

Data Science: Python, SQL, forecasting, experiment analysis, model evaluation, and dashboards.
Applied ML: Reproducible evaluation datasets, monitored classification, and human review.

Relevant Project Evidence

Analytical Work: At Meridian, used Python and SQL across forecasting, experiment analysis, and dashboard workflows.
Model Evaluation: At Northstar, built reproducible evaluation datasets for document classification; the service kept reviewers in control of approval.

Education & Profile

Example University (fictional) <i>BSc in Computer Science</i> Fictional degree for the public demo.	2017
Profile: Fictional portfolio example
